Value	Meaning
00b	The second processor is awake but not in SMI mode, so th
	first processor needs to wait for the second processor
505	before handling the SMI 52
01b	The second processor is sleeping/inactive, so the second
	processor may proceed to handle the SMI and should
510	handle SMI's on the first processor 52
10b	The second processor is awake/active and in SMI, so the
	first processor may proceed to handle the SMI and should
515	handle SMI's on both the first and second processors
